

Introduction to CAD-IT Korea

캐드아이티코리아 주식회사

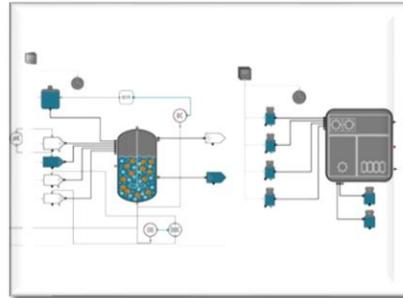

Mission : To facilitate innovation and to lower product development costs through the application of **multi-physics engineering** and **System simulation**.

Multi-Physics

- Innovation comes from engineering design
- Holistic design studies are the only cost-effective approach for engineering design

System Engineering

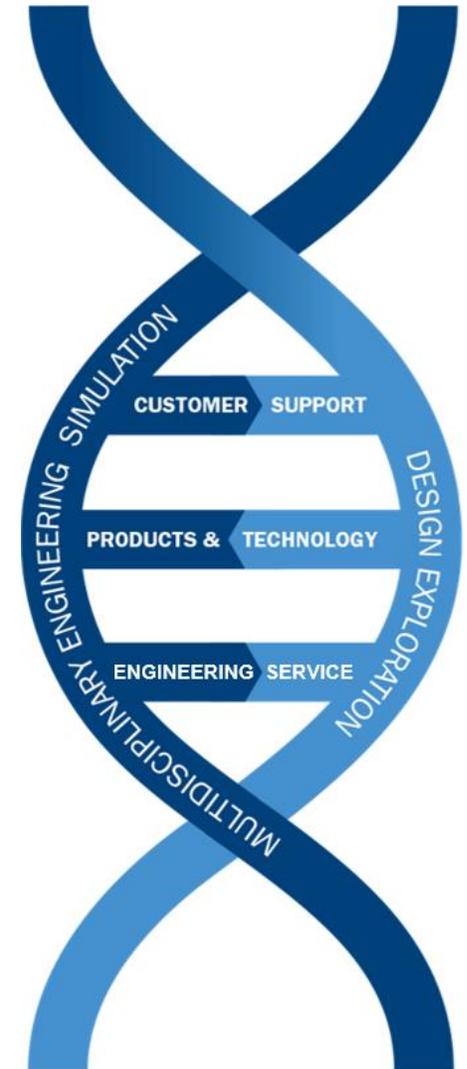

- Shortened early stages of design
- Optimized system and increased performance
- Enhanced reputation for expertise and knowledge in the marketplace

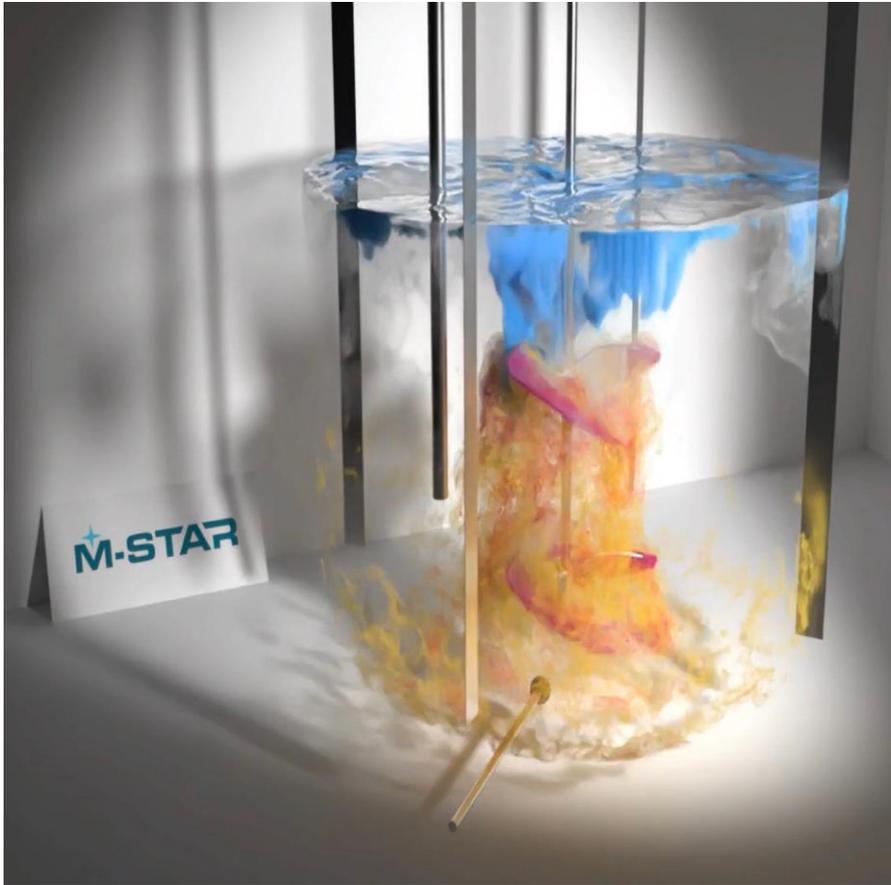

Cross Industry

- Bioengineering, Automotive, Aerospace, Electronics, Semiconductor, Chemistry, Energy and Defense, and so on.
- Significant investment in technology development

바이오 반응기 내의 유동현상을 실시간으로 정확하게 시뮬레이션 할 수 있는
M-STAR CFD는 GPU와 Lattice-Boltzmann 방법을 기반으로 한 전산유체역학 소프트웨어입니다.

Real World
Models.

Real Time
Results.

- Bioreactors
- Agitated Tanks
- CFD-DEM Simulations
- Free Surface Sloshing
- Droplet Dispersion
- HVAC & Climate Control

M-Star Clients

TRICIDA

abbvie

SPX

Genentech
A Member of the Roche Group

AstraZeneca

Bristol Myers Squibb

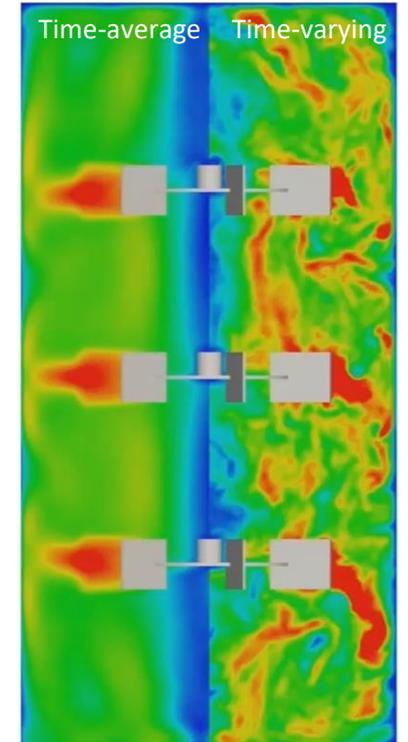

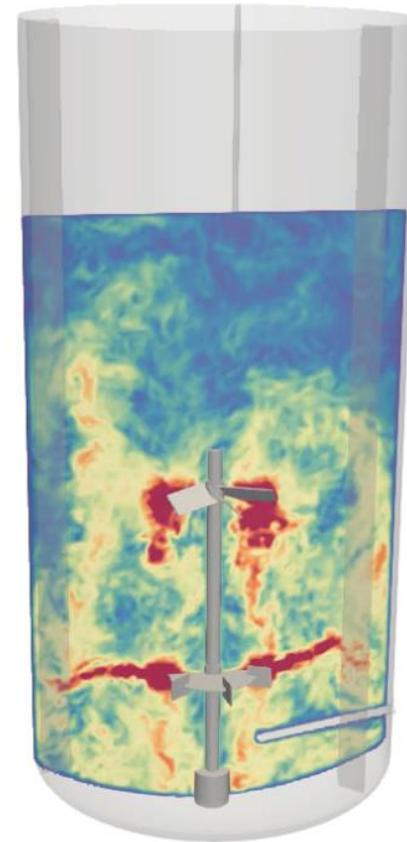

EASTMAN

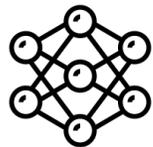

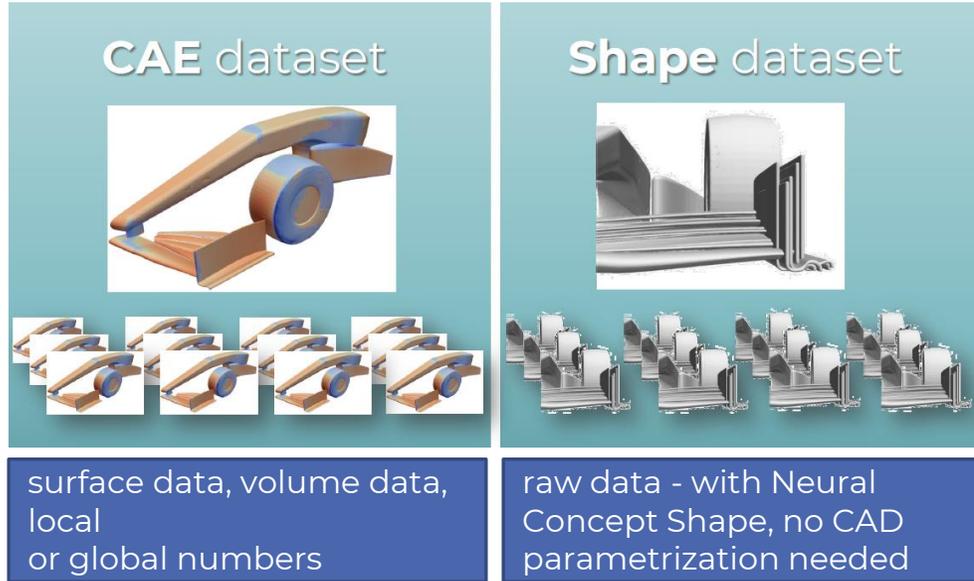

M-Star CFD is...used in scale-up and scale down operations

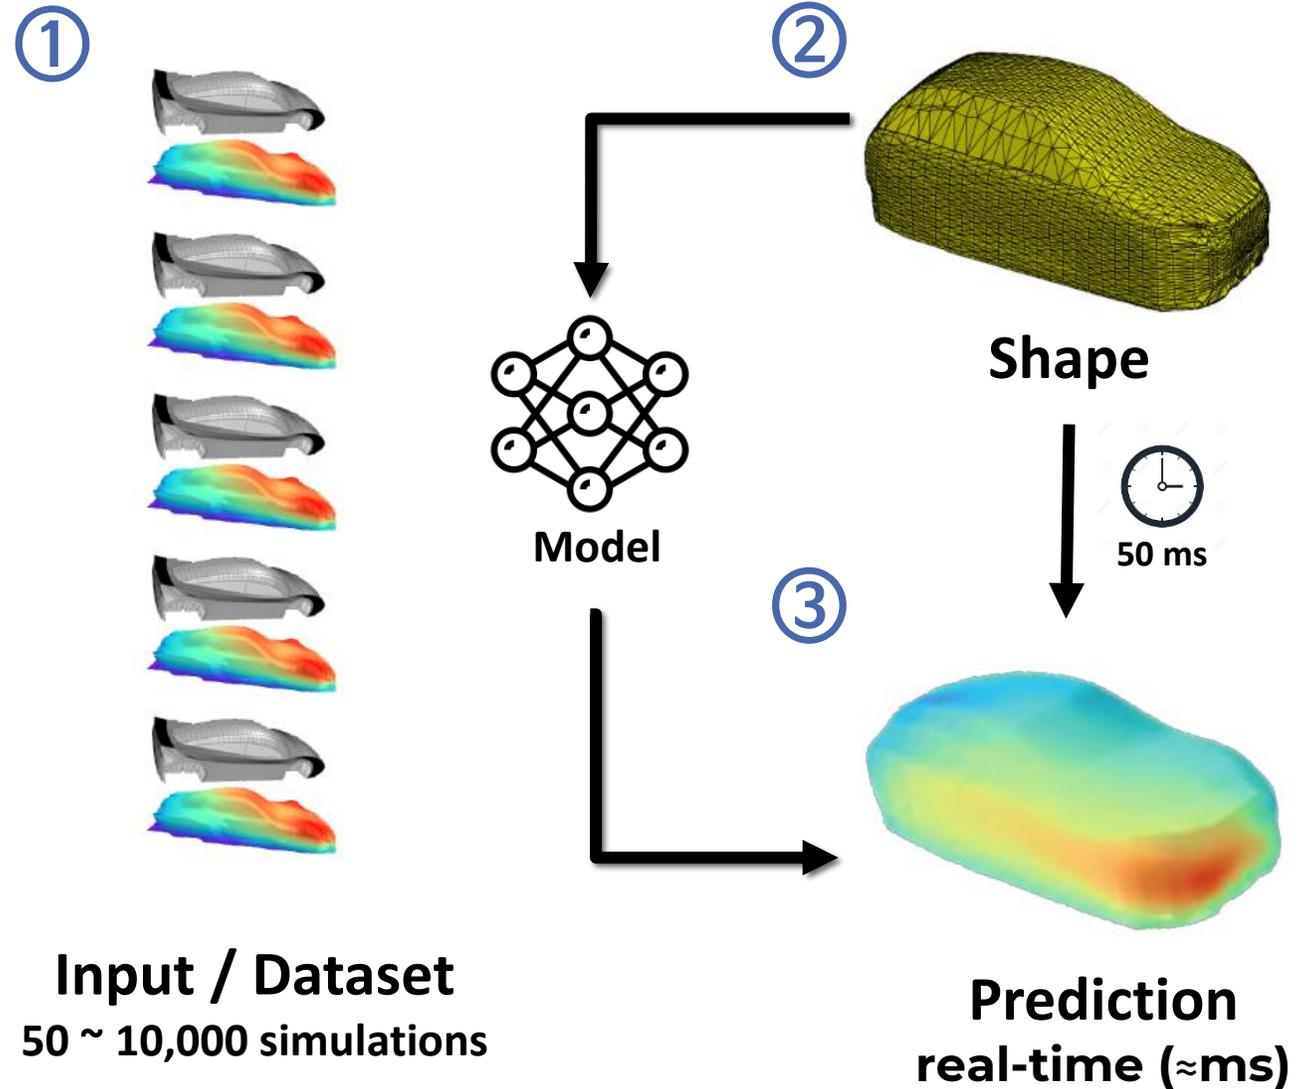

Time: 28.70s

통합 다중 물리역학 솔루션

STAR-CCM+®

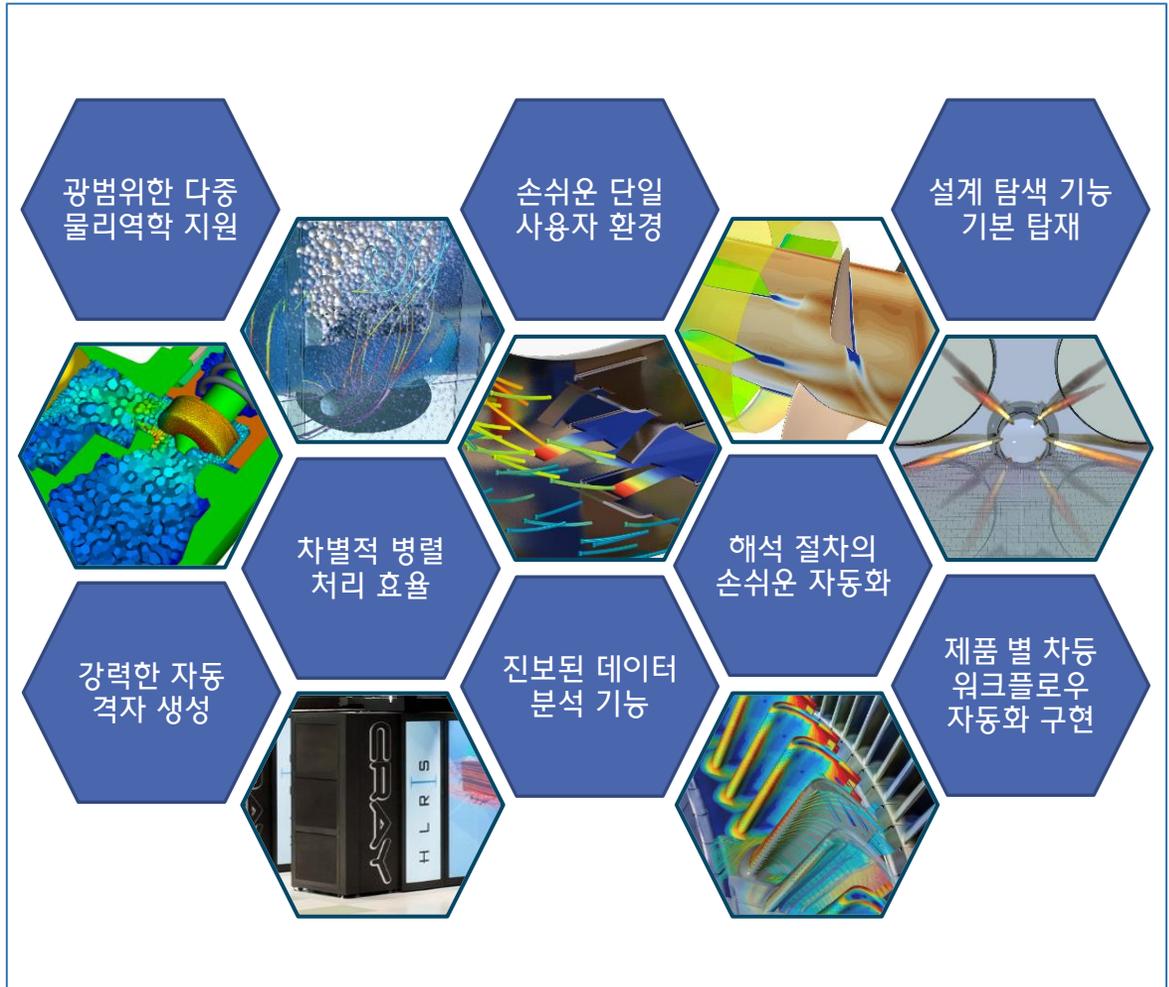

SIEMENS
Ingenuity for life

STAR-CCM+는 유체 역학, 고체 역학, 유체 구조물 상호 작용, 열 전달, 입자 역학, 화학 반응, 전기 화학, 전자기학, 음향 및 유동학을 위한 시뮬레이션 솔루션입니다. 다양한 다중 물리 현상이 복합적으로 나타나는 실제 현상을 정밀하게 분석할 수 있습니다.

시뮬레이션 전문가로부터 일반 설계 엔지니어까지 모두 사용할 수 있는 자동화 된 워크플로우를 제공하고 있습니다. 손쉬운 사용자 환경이 가장 큰 장점입니다.

STAR-CCM+를 사용하면 효율적으로 제품성능을 예측할 수 있고 제품 설계 프로세스를 처음부터 끝까지 안내하는 엔지니어링 정보를 확보할 수 있습니다.

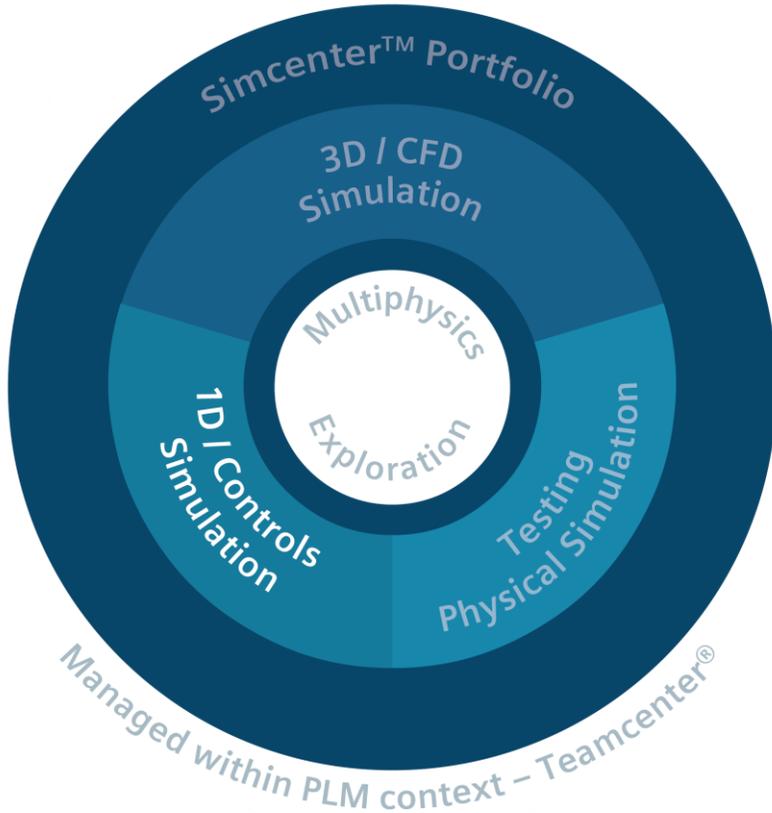

Engineer Innovation

AMESIM - Multi-Physics & Multi-Domain & System Integration

시스템 단위 성능 예측 해석 소프트웨어

SIEMENS
Ingenuity for life

Simcenter Amesim

Pressure Compensated Axial Swash Plate Piston

Swash plate angle [deg]

Time [s]

DCT6_RT_step1Lame - DCT6_RT_step1_6733_upgraded

Engine speed [rev/min]

1st input shaft speed [rev/min]

2nd input shaft speed [rev/min]

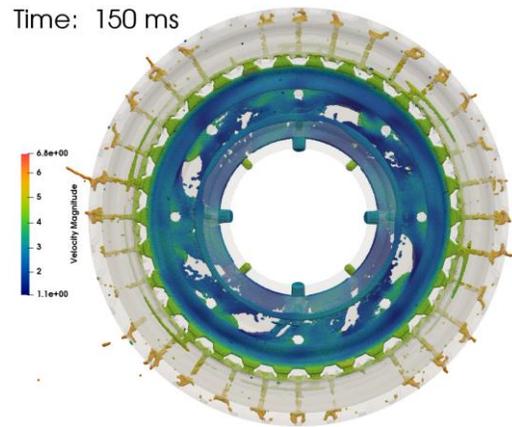

Final drive speed [rev/min]

Collaboration & workflow

SPH-FLOW

The SPH-flow solver is based on the **SPH method**

Time: 150 ms

Specific characteristics of the SPH (Smoothed Particles Hydrodynamics) method

Navier-Stokes-based

The exact Navier-Stokes equations are solved (like the Finite Volume method, but unlike the Lattice-Boltzmann method)

Meshless

Fluid is not described by a complex (un)structured mesh, but by a set of particles interacting with each others

Lagrangian

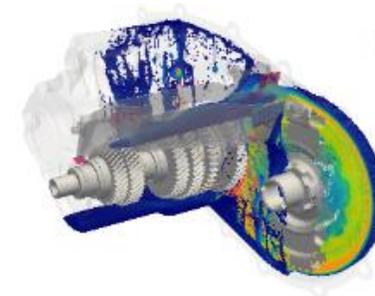

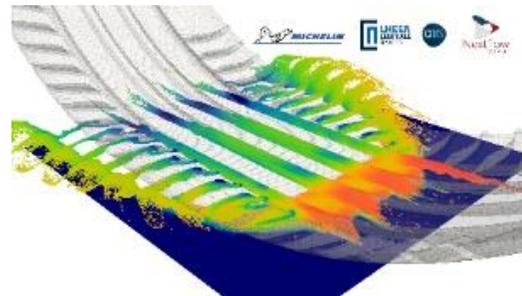

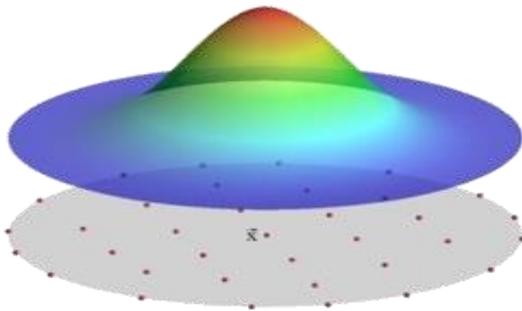

Particles are straightforwardly advected with the fluid flow.
No need for convective term modeling (and associated errors)

Free-surface inherently defined

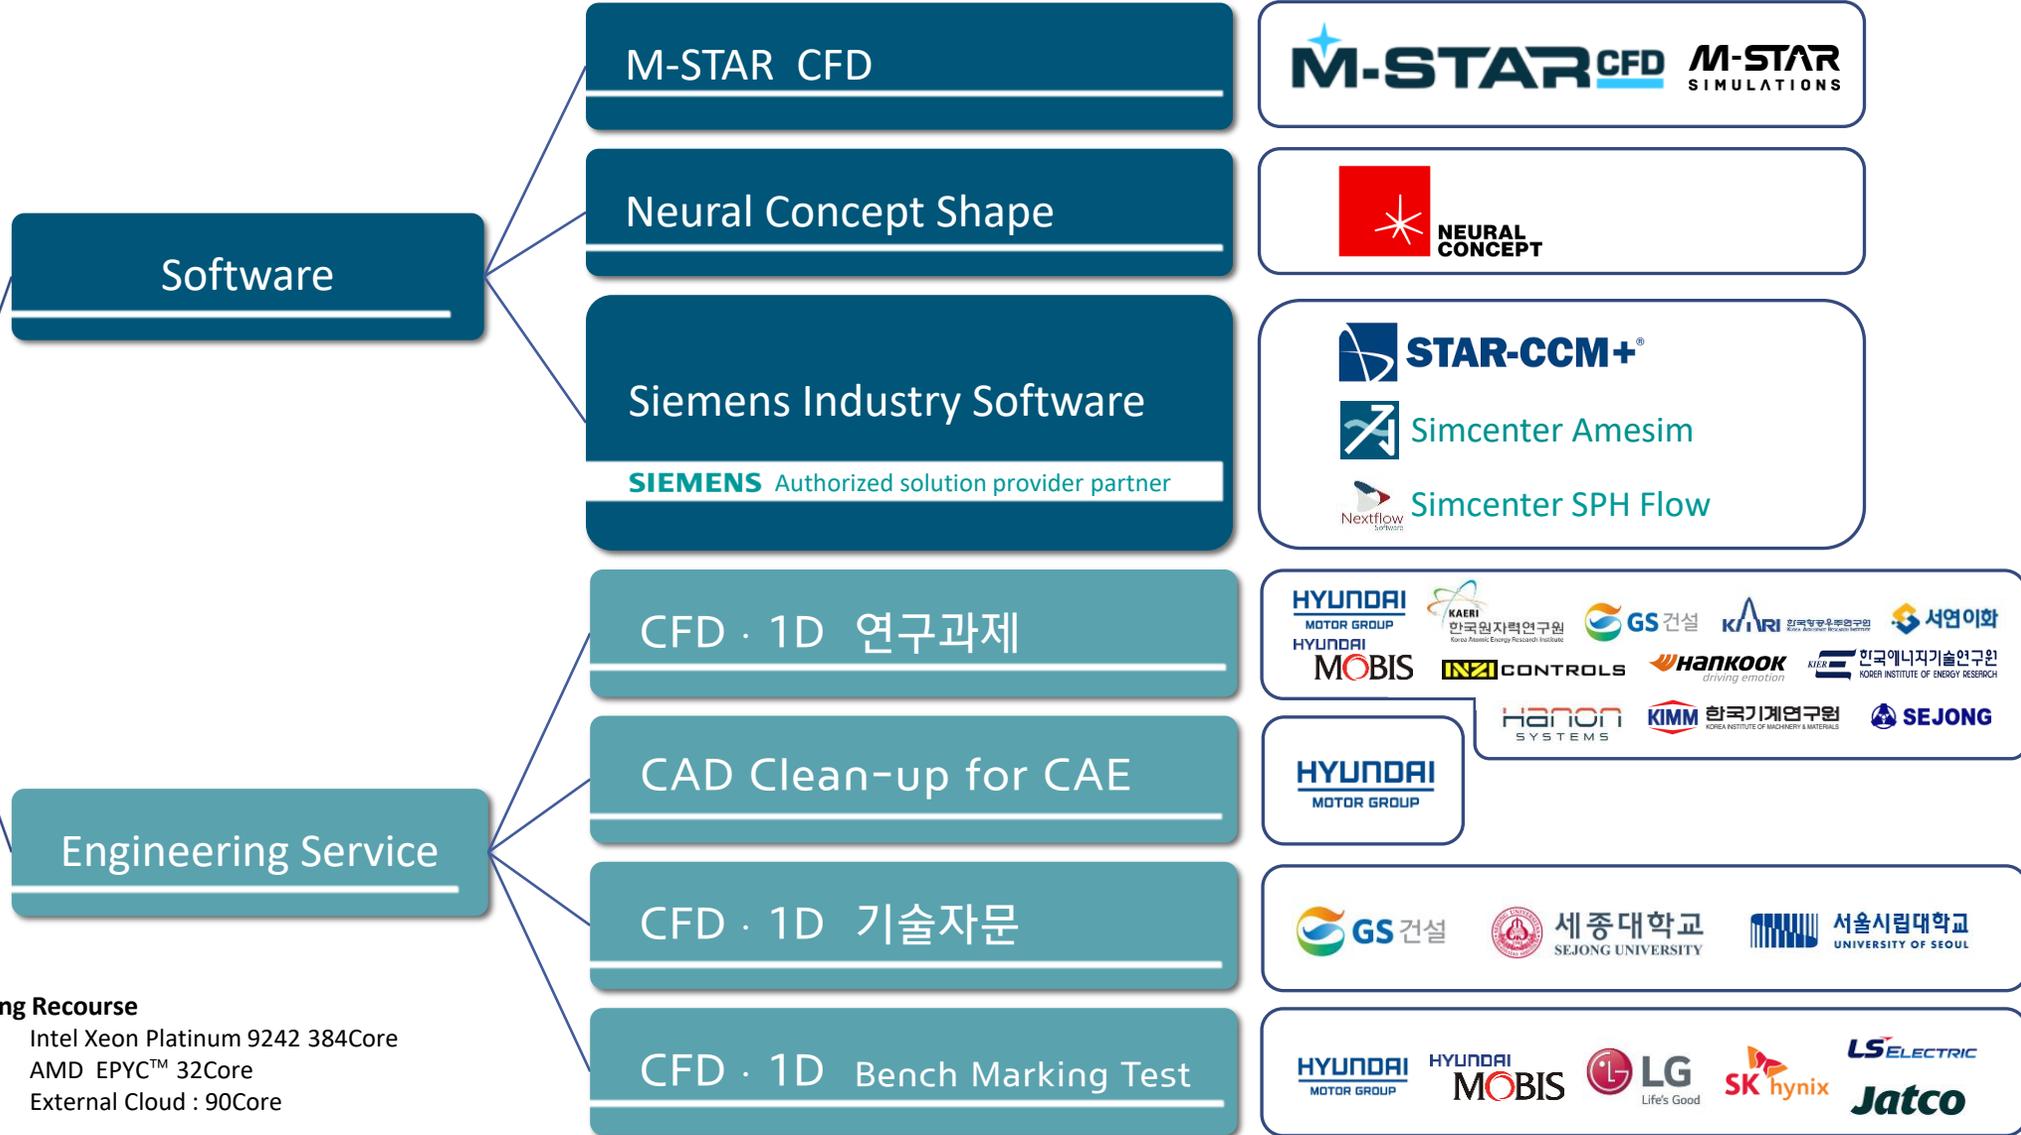

Fluid/fluid interfaces are naturally followed, even when one of the fluids is not modeled.
No needs for complex free-surface boundary conditions (and associated errors)

Explicit formulation

Time marching scheme is explicit, making method suitable for fast changing flows (impact, coupling...)

CAD-IT Korea Business Area

- **Computing Recourse**
 Intel Xeon Platinum 9242 384Core
 AMD EPYC™ 32Core
 External Cloud : 90Core
